11. (Original) An organic electronic device comprising:
a substrate having a surface with a first portion and a second portion,
without a well structure connected to or adjacent the first portion of the surface or the
second portion of the surface, wherein the first portion of the surface has a first
surface energy and the second portion of the surface has a second surface energy;
and
a liquid composition covering the first portion of the surface and contacting
the second portion of the surface, wherein the liquid composition has a third surface
energy that is higher than the first surface energy and lower than the second surface
energy.
12. (Original) The organic electronic device of claim 11, wherein the liquid
composition includes an organic active material.
13. (Original) The organic electronic device of claim 11, wherein the second portion
includes a charge transport layer.
14. (Original) The organic electronic device of claim 11, wherein the first portion
includes an insulating layer and the second portion includes an electrode.
15. (Original) The organic electronic device of claim 11, wherein the first portion of
the surface includes a surfactant.
16. (Original) The organic electronic device of claim 15 wherein the surfactant
includes a fluorine containing material.
